

An attempt to map mathematics I don't understand

Mickaël Launay

Micmaths

The mathematics we don't understand are, of course, the most interesting ones. Those which attract us, intrigue us, and motivate us. Just as there are a thousand ways to understand, there are also a thousand ways to not understand. Each person has it's way of not understanding. And there's always room for reflection: sometimes, to better understand means realizing that, ultimately, we didn't understand as well as we thought we did. In this talk, I will attempt to sort out my own ways of living and dealing with what I don't understand.
